What is software engineering ?

3 ↪

50 ⌂

Topic X

Saurabh Tiwari
Prof

Software engineering sees its practitioners as individuals who follow well-defined engineering approaches to problem-solving. These approaches are specified in various software engineering books and research papers, always with the connotations of predictability, precision, mitigated risk and professionalism. This perspective has led to calls[by whom?] for licensing, certification and codified bodies of knowledge as mechanisms for spreading the engineering knowledge and maturing the field.

Student one

Fingerprint based ATM System

Saurabh Tiwari

Prof, Daiict

APPLY +

⌚ Immediately

💼 5+ yrs exp

\$ \$50-\$70 a month

This project is a desktop application that uses the fingerprint of users for authentication. Since each individual has a unique fingerprint, this method of using fingerprint as a means of authentication to access your ATM is safer and more secure than using an ATM card. Users need not carry their ATM cards with them at all times – they can use their fingerprint to access ATM services.

To use the fingerprint-based ATM system, users have to log in to their account using their fingerprint. After logging in, once they provide their unique pin, they can conduct all kinds of banking transactions, from withdrawing cash to money transfer, and even viewing their account balance. Furthermore, users can also check the last five transactions from their account.
